The accredited auditor scheme provides independent oversight of safety systems and standards implemented on Queensland Government building and construction projects. [Accredited auditors for government building and construction projects | WorkSafe.qld.gov.au](#)

The selected Accredited Auditor (Construction) will conduct an inspection of the contractor's actual construction activities once for every 13 weeks of the expected construction period. For example, a project with an expected construction period of 24 weeks would require one Site Inspection whereas one of 26 weeks duration would require two.
